I have also tried to make a UR mounted on a MiR robot, but I did not use the "UR interface". Instead I made a interface with hardwired I/O because then it is possible to have active programs on both MiR and UR at the same time " and I find that a hardwired I/O interface reacts faster and better to control timing. Control theory in control
systems engineering is a
subfield of mathematics
that deals with the control
of continuously operating
dynamical systems in
engineered processes and
machines. The objective is
to develop a control model
for controlling such systems
using a control action in an
optimum manner without
delay or overshoot and
ensuring control stability.
